COLORMATCH*
LDR-20450

11/06/2013
000000

Colormatch* products are highly dispersed organic and inorganic pigments using an inert plasticizer as the pigment carrier vehicle.

Please fully evaluate the sample submitted by Chromaflo Technologies. This sample should be processed so that all critical performance properties can be evaluated. Check the color as well as any effect on other properties of the final compound/system or part. Since Chromaflo Technologies is not in a position to define critical properties or to fully duplicate processing conditions, it is your responsibility to evaluate and approve the sample. Your order verifies that the product design meets your requirements. If at any time you have a question on the product performance/design, please call a Chromaflo Technologies sales engineer or technical service representative prior to purchasing.

PROPERTIES -----	TYPICAL VALUES -----
PRODUCT CODE	LDR-20450
COLOR	BLACK LV 3SU
WEIGHT/GALLON	10.3804
PIGMENT TYPES	Carbon Black
